

Legislative Day for Parks February 6

Calling all state park supporters. The 2013 session of the Missouri General Assembly may be the best opportunity in years to secure passage of a bond issue for state facilities that includes funding for at least a portion of the state park system's huge backlog of vitally needed infrastructure repair and rehabilitation.

Legislative leaders, including House Speaker Tim Jones and Senate President pro tem Tom Dempsey, have indicated that a bond issue for a state building fund is a priority for the session that begins January 9. Facility needs of higher education, mental health, and highways are touted, rather than state parks, even though state parks received about ten percent of the Third State Building Fund in the 1980s.

Parks may expect some support from SJR 3, a measure already pre-filed by Senate Appropriations Committee Chair Kurt Schaefer, which would authorize up to \$950 million in bonds, including \$40 million for state park facilities. But there will be major discussion and changes in both houses before any bonding measure is approved and

MPA members visit Don Robinson State Park, which requires rehabilitation of basic infrastructure.

then finally submitted to a vote of the citizenry for adoption or rejection.

It is time for citizens from throughout the state to come to the capitol on the same day, Wednesday, February 6, to demand that state parks are included for a significant portion—at least ten percent—of any bonding measure. Ordinary citizens are best able to attest to their own love of state parks, and speak most effectively as constituents to their own representatives and senators. You can cite the health and other benefits parks provide for more than 17 million visitors a year, and the tremendous contribution of state parks to Missouri's economy, most recently estimated at more than \$1 billion a year.

You can point out that of all the buildings and all the water and sewer systems the state is responsible for maintaining, the state park system alone accounts for more than half of the total. Best of all, you can attest that you and other Missouri citizens, who have repeatedly voted by more than two to one to renew the parks and soils sales tax—which provides for employee salaries and other annual operating support for

What You Can Do

Put February 6 on your calendar and plan now to come to the State Capitol.

Call the office of your representative and your senator today and make an appointment to meet with them on February 6 (go to www.house.mo.gov or www.senate.mo.gov or call your local public library to find your state legislators and their office numbers).

Contact Nonie McClammer (turtle50@embarqmail.com, 573-619-2626) or Deb Schnack (debdon49@aol.com, 573-295-6137) so you can be put on their email list to receive further information and updates.

Persuade several friends to join you on February 6; the more voters, the better.

Go to the MPA website (parks.missouri.org), then to Issues&Action/Park Funding to learn more about the issue, and expect further email updates from us as well.

On February 6, arrive at the Truman State Office Building Room 493 by 9am for an orientation session (parking is tight in Jefferson City, but usually available at the Madison St. parking garage at the SE corner of Madison St. and E. Capitol Ave.).

(See "Legislative Day" on Page 2)

30th Anniversary Transition

The Missouri Parks Association celebrated its 30th anniversary in Ste. Genevieve September 28-30 in a well attended gathering that included a full menu of field trips and special events at historic buildings in addition to the usual meetings.

The weekend also marked a complete transition in leadership for MPA, with four new officers elected to take over in 2013. Steve Nagle of St. Louis, who retires in January from his post as director of planning for the East-West Gateway Council of Governments, will serve as president, while Deb Schnack of New Bloomfield, former trail coordinator and then director of planning and development for the park division, was elected vice president. Julie Townsend, an attorney and government affairs director for Advance America, will become secretary, and Melissa Hope of Jefferson City, with training in finance and experience with Sierra Club

and the Missouri Department of Health, will serve as treasurer. The new team takes over from longtime MPA stalwarts Susan Flader, president; Booker Rucker, secretary; and Eleanor Hoefle, treasurer.

Three new directors were elected: Darwin Hindman, who returns to the MPA board after fifteen years as Columbia's longest-serving mayor; Nonie McClammer, former deputy director of administration in the park division; and Josh Reeves, who manages a small construction company in Summerville. With six other new directors elected in 2011, MPA has lots of new blood.

Pat Jones, godmother of the Katy Trail and enthusiast for parks, conservation, and outdoor education, as well as a former MPA president and director, was announced as the recipient of MPA's highest honor, the Charles Callison Award. The award was presented to her during an orientation and transition gathering of new directors and incoming and outgoing officers at her home at Prairie Fork Conservation Area in December.

Four MPA stalwarts who were present at the first meeting of MPA at Montauk State Park in October 1982 join in cutting MPA's 30th anniversary cake. L to R, John Karel, Eleanor Hoefle, and Karen and Al Haller.

the park system—will also support a bond issue that includes significant funding for state parks.

We can make the case, but we need to do it one legislator at a time, on a day when virtually all legislators are being visited by their own constituents about this issue. Will you come and speak with your own elected leaders? They listen best to those who vote in their districts!

Ste. Genevieve Common Field and Old Town Site Needs Protection

Ever since the Missouri Parks Association first met in Ste. Genevieve in 1989, it has been concerned about protection of the remarkable cultural landscape that is the Big Common Field—*Le Grand Champ*—the rich agricultural land in places nearly a mile wide in the floodplain of the Mississippi River that was the original magnet attracting early French settlers to cross the river to the site of what would be Missouri's first and most historic colonial settlement.

Long lots in the big common field, wider than in the 18th century owing to agricultural consolidation, are still evident on Google Earth.

French authorities in 1752 divided the rich bottom land into the traditional "long lots" derived from Medieval France and granted the lots to families wishing to farm on the west side of the river. These long lots were nearly a mile long, extending from the river bank to the bluff line, but were only a few hundred feet wide. In this egalitarian manner, every family had equal access to all of the varying soil conditions across the bottomland. The individual lots were not fenced, but each family contributed a certain amount of labor each year to maintain a perimeter fence around the entire big field, in part to control livestock. Although the long lots have since been consolidated into larger farm holdings, this pattern of parallel, narrow divisions in the landscape—from river to bluff—remains quite visible from the air.

Near the river's edge, the settlers laid out their house lots, some

in ranks of blocks four lots square and some at the river end of the owner's long lot. The houses were built of vertical logs, most of them with wall posts buried directly in the ground (*poteau-en-terre*). The result was a string town extending some three miles along the river with several clusters of houses in blocks in the north, middle, and southern part of the field.

Early on, it became apparent that the Mississippi was a problem, caving the banks and washing away some of the lots and houses, especially in the north—the original town center (*chef lieu*) where the commandant lived and the church was located. Then came a year of especially high water—1785, *L'annee des Grandes Eaux*—after which local authorities decided to relocate the town center, including the commandant's residence and the church—to approximately the midpoint of

the settled area, where a new church was built in 1787. Some settlers decided to rebuild on higher ground in various places along the bluffs, particularly at "*Petite Cotes*," the high ground between the forks of Gabouri Creek. With continued flooding, more families made the move to higher ground, and in 1793 Governor Carondelet ordered the removal of the church and the seat of government to the *Petite Cotes*, the "little hills" northwest of the big common field. More than thirty of the vertical log houses the settlers built there at Nouvelle Ste. Genevieve, most of them on stone foundations or sills, still stand to this day, the largest concentration of such survivals any place in North America.

Fast-forward nearly 200 years to 1973, another big flood year. When the waters receded they revealed bits of brick, ceramic, and

(See "*Ste Genevieve*" on Page 4)

("Ste. Genevieve" from Page 3)

other artifacts near the downstream end of the common field. F. Terry Norris, archaeologist for the Corps of Engineers St. Louis District, and others undertook a series of surface investigations (the landowner did not allow excavation) that eventually substantiated ten 18th century artifact concentrations suggestive of likely house sites in an area of about 38 acres just inside an agricultural levee that had been built some decades previous.

His curiosity piqued, Norris did substantial analysis of channel changes of the Mississippi River since the 18th century and determined that the small 38-acre tract was almost certainly the only segment of the original three-mile string of 18th century houses that had not been completely obliterated by the river. Comparison with historic 18th century maps and with maps produced independently by David Denman for a University of Missouri multidisciplinary team studying French colonial land transactions and related documents suggested that the tract matched an area in the south-central portion of the common field where house lots were located. This stunning dis-

covery of a portion of old Ste. Genevieve reversed the previous consensus that no vestiges of the original town remained.

But even as the original town site was in process of being documented, economic leaders of Ste. Genevieve and Perry counties and officials of the Southeast Missouri Regional Planning and Economic Development Commission were seeking potential sites for a new harbor and port on the Mississippi River. By 1983 they had created a New Bourbon Regional Port Authority and apparently settled on a site straight out across the big common field from the historic bluff-top community of New Bourbon, about three miles south of new Ste. Genevieve. In an undated environmental assessment, the site was described as an already operating sand and materials inbound transfer facility with twenty acres on the riverside of an agricultural levee and a potential industrial site of 105 acres behind the levee.

This 1793 map depicts the location of old Ste. Genevieve. The surviving 38-acre archaeological site of the town is near the Ste. Genevieve label on the right side of the map. Mont Genereux is New Bourbon.

When MPA met in Ste. Genevieve in 1989, it expressed concern about the proposed port's possible impact on the old town site, and urged its acquisition as part of the state historic site in Ste. Genevieve

as well as protection of the cultural landscape of the common field. (Another MPA recommendation, the acquisition of a French colonial vertical log structure for the state historic site, was satisfied in the wake of the big flood of 1993, when two such structures, the Beauvais-Amoureux and Delassus-Kern houses, were do-

nated to the park system.) Several years later the Archaeological Conservancy, a national non-profit that acquires endangered archaeological sites, apparently inquired regarding potential purchase of the old town site, but the owner was not interested in selling. MPA met in Ste. Genevieve again in 1999 and again urged state park acquisition of the old town site and vigilant protection of the big common field—protection that was even more vital to the state now that this archaeological site and cultural landscape of surpassing national and international significance were in the viewsheds of the state's new historic structures.

As it happened, there were inadequate funds for development of the New Bourbon Port, so activity there remained at low ebb for more than two decades. But during the severe economic downturn of 2009, the New Bourbon Port Authority received major economic stimulus funds from the Economic Development Administration of the U.S. Department of Commerce that enabled it to commence construction of the \$6 million project.

Construction was well underway when MPA returned to Ste. Genevieve in September 2012 for its 30th anniversary celebration. MPA for the third time urged more attention to the Big Common Field and especially to the old town site, and specifically asked the Division of State Parks, the Missouri State Historic Preservation Office, the National Park Service, and the U.S. Army Corps of Engineers to closely monitor the development of the port facility and ensure that the common field and the old town site would not be encroached upon by further development.

By this time the National Park Service was also well along in a congressionally mandated study of the feasibility of NPS involvement in Ste. Genevieve. Though the study has not yet been released, it was clear during a workshop in August that NPS staff clearly recognized the surpassing historical significance of Ste. Genevieve *and of the cultural landscape of the big common field*. NPS officials, in fact, seemed startled to learn of construction of the new port next to the old town site—which, they learned, had recently been acquired by the Port

Authority of New Bourbon.

There is no doubt that Ste. Genevievians appreciate the remarkable tangible survivals of their extraordinary history. Numerous individuals in the community have been extremely generous with their time, effort and personal resources in restoring and maintaining their homes and other historic structures and sharing them with the public. Although the community in the past has generally not favored National Park Service involvement, it now seems highly supportive of an NPS presence in the town as an imprimatur of the community's significance that may help attract more visitation from afar.

The historic preservation movement began in the preservation of historic houses; an appreciation for the historic significance of cultural landscapes is a more recent phenomenon. The remarkable survival of *le grand champ*, in nearly unaltered condition, is one of Missouri's more remarkable preservation stories. That "the big field" includes also a small portion—undisturbed—of the original riverside site of old Ste. Genevieve makes it all the more significant. That the "old town" is beyond the protection of new Ste. Genevieve's preservation ordinances, that the bulk of the common field is in private ownership, and that a sizeable industrial enterprise is being constructed very close by makes it even more important that all interested parties work together to find a fair balance that allows appropriate economic development that is consistent with the preservation of Ste. Genevieve's priceless historic legacy.

The sign for the new port stands on the corner of the 38-acre Old Town site.
